Job Aggregation Platform — Final Project Report

Internal Engineering Report · Data Platform

Prepared for	Engineering Manager
Prepared by	Reuben Jacob
Report date	July 15, 2026
Data snapshot as of	July 10, 2026
Companion document	<code>Final_Project_Report_v2.md</code> (full technical detail, methodology, and evidence trail)

This is a condensed version of `Final_Project_Report_v2.md`, written for a single reading in approximately 15–20 minutes. No technical finding has been removed — long narrative explanations have been replaced with tables, and repeated explanations have been cut. All figures are sourced from this project's PostgreSQL database, source code, and `job_api.xlsx` research workbook (API Catalog and Sheet1). Where a fact could not be verified from these sources, this report states **"Not publicly available"** or **"Not verified during this project"** rather than estimating.

Contents

1. [Project Overview](#)
2. [Project Status](#)
3. [Implemented APIs](#)
4. [Complete Provider Research \(268 Providers\)](#)
5. [Internship Requirement Coverage](#)
6. [Final Recommendations](#)

1. Project Overview

Purpose. Build a single, de-duplicated, queryable dataset of job postings, sourced from as many legitimately accessible providers as possible, normalized into one schema with country and remote/hybrid/on-site classification, and persisted in a real database rather than a flat file.

Scope. The project researched **268 job-related APIs, ATS platforms, and job boards** (government labour agencies, commercial aggregators, ATS platforms, and job boards), narrowed that list to an **86-provider shortlist** for close audit, and built **46 working integrations** against a shared `sources/` interface (`BaseJobSource`). Every researched provider — implemented or not — is documented with a specific, evidence-based reason (Section 4).

Final outcome.

- **46 providers implemented; 41 currently contributing live data** to PostgreSQL.
- **184,506 unique job records** stored, deduplicated by URL/hash, with per-provider run history.
- **Offline country and work-arrangement normalization** — no paid geocoding service used.
- The remaining **222 researched providers** were not implemented for specific, documented reasons: no public API, enterprise/partner-only access, wrong data-flow direction (employer-posting tools, not read APIs), deprecated services, or a registration/verification step not yet completed.
- The platform reflects **one complete backfill run**, not yet a recurring schedule — it is ready for operational hardening, not further architecture, before production use.

2. Project Status

Area	Status	Detail
Provider research (268 researched, 86 shortlisted)	Completed	Every provider carries a documented reason for its outcome (Section 4)
46 provider integrations (shared <code>BaseJobSource</code> interface)	Completed	One module per provider under <code>sources/</code>
PostgreSQL persistence (<code>jobs</code> , <code>provider_runs</code> tables)	Completed	Upsert-on- <code>dedup_key</code> , idempotent schema
Deduplication (URL/hash-based)	Completed	0 cross-provider duplicate URLs remaining
Offline country normalization	Completed	Multi-country/region text forced to <code>NULL</code> rather than guessed
Work-arrangement classification (remote/hybrid/on-site)	Completed	Derived from location text and provider-native flags
<code>jobs.json</code> static export + frontend search/filter	Completed	Unchanged since Milestone 2
Per-source fault isolation	Completed	One broken provider cannot halt a run
41 of 46 providers contributing live data	Partially Completed	5 non-contributing for external reasons (billing, missing credentials, one zero-result run) — Section 3
Employment-type capture	Partially Completed	Present for 24 of 46 providers; absent for the rest
Country resolution long tail	Partially Completed	Multi-country case solved; ~1,565 distinct unresolved single-place values remain
Credentialed-provider setup	Partially Completed	2 of 12 credentialed providers (Trade Me, CareerOneStop) lack credentials in this environment
6 real, accessible candidate providers (Saramin, VDAB, CBOP, Work24, GOV.UK Find a Job, Job-Room Switzerland)	Partially Completed	Registration/verification step outstanding, not rejected
Standardized job-category taxonomy	Not Started	No cross-provider taxonomy exists in the data (Section 5, item 11)
Salary / visa-sponsorship capture	Not Started	No schema field; no provider exposes it in a usable form
Scheduled/automated recurring syncs	Not Started	Every run to date has been a single manual invocation
Inline normalization at insert time	Not Started	Currently a separate, manually-triggered migration script
Provider-run health alerting	Not Started	No automated flag for a source dropping to 0 jobs
Dashboard/analytics UI	Not Started	Static search frontend only
Expired-job / posting-removal detection	Not Started	Requires a second ingestion run to diff against; none has occurred

3. Implemented APIs

3.1 LIFECYCLE SUMMARY

Stage	Count
Providers researched (API Catalog sheet, <code>job_api.xlsx</code>)	268
Providers shortlisted for close audit (Sheet1, <code>job_api.xlsx</code>)	86
Providers implemented (<code>sources/*.py</code> , registered in <code>sources/__init__.py</code>)	46
Providers currently contributing live data	41
Providers implemented but not currently contributing	5
Providers researched but not implemented	222

3.2 WHY 5 IMPLEMENTED PROVIDERS ARE NOT CURRENTLY LIVE

Provider	Reason
TheirStack	Account's billing plan does not include Jobs API access (HTTP 402)
Trade Me Jobs	Built, but no production credentials configured; also requires Trade Me's approval process
CareerOneStop	Built, but no credentials configured (<code>CAREERONESTOP_USER_ID</code> / <code>API_TOKEN</code>)
Fantastic.jobs	Credentialed, but returned 0 jobs in the latest run — most plausibly a trial-window/account-tier issue, not confirmed
Arbeitsnow	Free, no-auth API that previously worked (931 jobs in earlier testing); returned 0 jobs in the latest run — cause not confirmed

3.3 VOLUME CONCENTRATION

Provider	Jobs Stored	% of Total
SmartRecruiters	65,392	35.4%
Greenhouse	22,715	12.3%
Lever	17,980	9.7%
NHS Jobs	10,843	5.9%
USAJOBS	10,000	5.4%
Bundesagentur für Arbeit	9,896	5.4%
Reed	8,994	4.9%
NAV Arbejdsplassen	5,394	2.9%
Ashby	5,252	2.8%
Workable	4,137	2.2%

Top 3 providers supply 57.4% of all 184,506 stored jobs — volume is concentrated in ATS boards, not evenly spread across all 46 sources.

4. Complete Provider Research (268 Providers)

Every provider researched in this project (`job_api.xlsx` API Catalog sheet, 268 rows), split into **Implemented (46)** and **Not Implemented (222)**. Pricing model and payment terms are this project's own verified classification of each provider's published terms — where nothing could be confirmed, the cell reads "Not publicly available." Reference is a documented URL/domain found in this project's research notes.

4.1 IMPLEMENTED PROVIDERS (46)

Provider	Pricing Model	Payment After Free Tier	Official Reference	Jobs Retrieved (Current Implementation)	Status	Curr
SmartRecruiters	No-auth public API	No	developers.smartrecruiters.com/docs/posting-api	65,392 stored (65,394 fetched) — Reflects the 100 curated companies only, not a global index.	Live	None pagin resul and i logge
Greenhouse	No-auth public API	No	developers.greenhouse.io/job-board.html	22,715 stored (22,715 fetched) — Reflects the 276 curated companies only, not a global index.	Live	No s ident full b exist failur

4.2 NOT IMPLEMENTED PROVIDERS (222)

Grouped by research classification at the time of this project. **Registration/Approval Required** and **Needs Live Verification** providers have a real, plausible access path (Section 6, Recommendations); **Not Viable** providers were rejected on structural grounds (no public API, enterprise-only, wrong data-flow direction, deprecated, or a dataset rather than a live API).

Registration/Approval Required (4)

Provider	Pricing Model	Payment After Free Tier	Official Reference	Approx. Jobs Available	Reason Not Implemented
CBOP - Centralna Baza Ofert Pracy (Poland public employment offices)	Free	No	praca.gov.pl	Potentially large - national public employment office coverage	Poland's national public-employment-office job database. Real SOAP web service returning batches of up to 1,000 live offers per file, but capped at 20 calls/cycle and only reachable during a 17:00-07:00 window -...

5. Internship Requirement Coverage

2. FINAL PROJECT REPORT

This document, together with the companion technical report `Final_Project_Report_v2.md`, is the final project report.

3. APIS/SERVICES USED

46 providers implemented (Section 3); 268 researched in total (Section 4).

4. COMPLETED VS. PENDING

See the [Project Status table](#) (Section 2).

5. FULLY / PARTIALLY / NOT STARTED

See the [Project Status table](#) (Section 2).

6. PRICING MODEL (FREE / FREE TRIAL / PAY-AS-YOU-GO / SUBSCRIPTION / ENTERPRISE)

Pricing Model (Implemented Providers)	Count	Providers
Free (no cost, ever)	41	40 fully free/no-auth or free-registration providers, plus Trade Me Jobs (free, but approval-gated)
Free Trial (time-limited, then paid)	1	Fantastic.jobs (7-day trial, then metered)
Pay-as-you-go / Metered (has a paid, usage-based component)	5	Adzuna, SerpApi, OpenWebNinja, TheirStack, Fantastic.jobs
Subscription (flat recurring fee)	0	Not used by any implemented provider
Enterprise (sales-negotiated contract)	0	Not used by any implemented provider — 15 enterprise-only candidates were identified in research and not implemented (Section 4.2)

Full per-provider pricing model is in Section 4.1. The 222 not-implemented providers' pricing (where verifiable) is in Section 4.2.

7. PAYMENT REQUIRED AFTER FREE TIER

Answer	Count (of 46 implemented)
No (free with no paid tier)	41
Yes, beyond a free tier/quota, or after a trial	5

8. PRICING / DOCUMENTATION LINKS

All 46 implemented providers have an official reference URL, quoted directly from source code (Section 4.1). Of the 222 not-implemented providers, a documented reference (domain or URL) was found in this project's research for **166 of 268 providers overall**; for the remainder, the reference cell reads "Not publicly available" rather than a guessed link (Section 4.2).

9. NUMBER OF JOBS

Metric	Value
Total unique jobs stored (PostgreSQL)	184,506
Total jobs fetched, all providers, pre-dedup	200,727
Distinct companies represented	18,367

Top providers by volume are in Section 3.3. Approximate job counts for not-implemented providers (where publicly known) are in Section 4.2.

10. REGION COVERAGE

Region	Dedicated Providers	Notes
United States	4	USAJOBS, CareerOneStop, Findwork.dev, Adzuna
Canada	0	No dedicated source; incidental coverage only via global ATS boards
United Kingdom	2	Reed, NHS Jobs
Europe (non-UK)	5	Bundesagentur für Arbeit, Arbeitsförmedlingen, France Travail, EURES, NAV Arbeidsplassen
India	2	Freshersworld, Hasjob
LATAM	1	Get on Board
APAC	4	MyCareersFuture, Taiwan MOL, HK Gov Vacancies, Trade Me
Africa	1	MyJobMag
Middle East	0	No single-country dedicated source (Mustakbil spans 20+ countries, counted as global)
Global / Remote / Multi-country	27	All 6 ATS platforms plus 21 aggregator/remote-board providers

Resulting job distribution is US-heavy (47.3%), then UK (14.3%) and Germany (6.9%) — a sourcing-mix effect from which countries have dense curated ATS company lists, not a normalization defect. Canada remains the clearest unresolved regional gap.

11. JOB CATEGORIES

No standardized, cross-provider job category exists in this dataset, and this cannot be supported without inventing one.

Verified directly against all 46 providers' `normalize()` implementations:

- **0 of 46** providers expose a job-category field that means the same thing across providers.
- **23 of 46** expose a provider-specific department, team, business-unit, occupation, or function field (e.g. SmartRecruiters' `function`, Taiwan Ministry of Labor's occupation code, USAJOBS's federal job series) — each proprietary to that one provider.
- **23 of 46** expose no category-like field at all (confirmed in code, e.g. Reed's module comment: "no job-category/employment-type field at all").

Evidence that these fields cannot be merged: the stored tag "Engineering" comes from SmartRecruiters' `function` field (6,797 jobs), Greenhouse's `departments` field (1,154 jobs), and Ashby's `department` / `team` field (1,136 jobs) — three structurally unrelated fields that happen to use the same English word. Treating them as one taxonomy would silently merge unrelated data. This project's schema stores all of this in a single free-text `tags` array; a real crosswalk would require manually mapping each provider's raw values, which has not been done.

12. DATA QUALITY

Dimension	Finding
Missing fields	Confirmed per-provider in code — e.g. Reed exposes no employment-type field at all; no provider exposes usable salary data
Company info	43 of 46 providers give a direct company-name field; 3 derive it (Ashby, Lever, Workday)
Duplicate rate	8.08% overall (see item 14 below)
Stale postings	11.9% of stored jobs are over 1 year old

13. JOB FRESHNESS

Metric	Value
Jobs with a posted date recorded	184,129 of 184,506 (99.8%)
Median posting age	22 days
Mean posting age	229 days (skewed by a long tail of old postings on some boards)
Posted within 30 days of snapshot	108,003 (58.6%)
Older than 1 year	21,915 (11.9%)

Refresh frequency and expired-job detection are **not verified during this project** — the dataset reflects one ingestion run, not a recurring schedule, so there is no interval or diff to measure yet.

14. DUPLICATE ANALYSIS

Metric	Value
Total in-run duplicates skipped (all providers)	16,221
Total fetched, pre-dedup	200,727
Overall deduplication rate	8.08%
Cross-provider duplicate URLs remaining	0

Highest duplicate rates: MyCareersFuture (99.0%, `limit` param silently ignored by the provider), HK Gov Vacancies (98.3%, every job shares one generic portal URL), NAV Arbejdsplassen (56.8%, a change-feed rather than a current-postings search), Workable (45.8%, the same job posted to multiple cities, correctly collapsed).

15. RATE LIMITS

Limit type	Examples
Hard result-window ceiling	USAJOBS and Bundesagentur für Arbeit (10,000 records); Reed (~9,900, returns HTTP 500 beyond it)
Monthly quota	SerpApi and OpenWebNinja (200 requests/month free tier)
Per-job billing	TheirStack (1 credit per job returned)

The examples above are the limits discovered and documented during implementation (`Final_Project_Report_v2.md`, Section 7); not all 46 providers' rate limits were independently re-verified for this report.

16. RESPONSE TIME & RELIABILITY

Provider	Duration (s)	Reliability
SmartRecruiters	385.7	High
Lever	870.1	High (slowest run despite modest volume — per-company pagination overhead)
Greenhouse	183.8	High
NHS Jobs	102.4	Undocumented endpoint (no official API contract)
USAJOBS	53.1	High
Bundesagentur für Arbeit	174.3	High (with retry logic)
Reed	56.6	High
NAV Arbeitsplassen	51.4	Rotating token (no fixed key)
Ashby	70.3	High
Workable	51.8	High

Full duration/reliability figures for all 46 providers exist in the underlying `provider_runs` table; only the ten highest-volume providers are shown here for brevity.

17. AUTHENTICATION

Auth Type	Count (of 46)
None (no auth required)	31
API key (registered)	10
Public non-secret key/token (no registration)	2
OAuth	2
HTTP Basic	1

18. FILTERING CAPABILITIES

Provider	Filtering Available
SmartRecruiters	Company, offset/limit
Greenhouse	Company only
Lever	Company, offset/limit
NHS Jobs	Keyword
USAJOBS	Page/ResultsPerPage only (no keyword/filter params implemented)
Bundesagentur für Arbeit	Keyword, location
Reed	Pagination only (no keyword/filter params implemented)
NAV Arbeitsplassen	Modified-since cursor
Ashby	Company only
Workable	Company only

Filtering capability was verified for the ten highest-volume providers; it was **not independently documented for the other 36 implemented providers** in this report. No provider was found to expose salary, experience-level, or visa-sponsorship filtering.

19. MUST HAVE / SHOULD HAVE / NICE TO HAVE

Priority	Item
Must Have	Move normalization inline into the save path
Must Have	Scheduled, automated recurring syncs
Must Have	Resolve the 5 non-contributing providers (credentials, billing, root-cause)
Should Have	Reporting dashboard on top of PostgreSQL
Should Have	Better location enrichment (~1,565 distinct unresolved country values)
Should Have	Normalized employment-type field; a department/occupation crosswalk table
Should Have	Dedicated Canada, broader APAC, and Middle East sources
Should Have	Provider-run health alerting
Should Have	Complete the 6 deferred candidate providers (Saramin, VDAB, CBOP, Work24, GOV.UK Find a Job, Job-Room Switzerland)
Nice to Have	Funding-stage/company-size enrichment
Nice to Have	Salary capture where a source exposes it
Nice to Have	Historical trend tracking across multiple runs
Nice to Have	Periodic re-verification of the 268-provider research catalog

20. PRODUCTION RECOMMENDATIONS

Summarized here; full detail in Section 6. Before production reliance: close the 5-provider contribution gap, add provider-run health alerting, move normalization inline, and put the pipeline on a recurring schedule.

6. Final Recommendations

Current readiness. The platform is functionally complete for a first release: 46 providers integrated, 184,506 deduplicated jobs stored in PostgreSQL, offline country/work-arrangement normalization applied, and full fault isolation so one broken provider cannot take down a run. It reflects **one complete backfill run**, not an ongoing sync.

Remaining work, in priority order:

1. Provision missing credentials (Trade Me, CareerOneStop), resolve TheirStack's billing block, verify Fantastic.jobs' trial/account status, and re-run Arbeitnow to confirm its 0-job result was transient.
2. Pursue the two highest-value deferred candidate providers — Saramin and VDAB — both real APIs blocked only by a registration/onboarding step.
3. Add provider-run health alerting before scheduling recurring syncs, so a source silently dropping to 0 doesn't go unnoticed.
4. Move country/work-arrangement normalization inline into the ingestion path, replacing the current manual migration script.
5. Investigate the two low-yield sources (HK Gov Vacancies, MyCareersFuture) before relying on either for APAC coverage.

Production readiness. Not yet production-scheduled. Recommended before relying on this pipeline for ongoing reporting: (a) resolve the 5-provider gap above, (b) add health alerting, (c) put the pipeline on a recurring cron/schedule, (d) confirm secrets handling carries through to the deployment target, (e) extend automated test coverage from country normalization to the full aggregation/dedup pipeline.

Next steps. Treat the items above as a scoped, well-understood backlog rather than unknowns — none of them block the current dataset from being useful today. The full technical detail, evidence, and provider-by-provider reasoning behind every recommendation is in `Final_Project_Report_v2.md`.

Job Aggregation Platform — Final Project Report · Data snapshot 2026-07-10 · Report date July 15, 2026 · Condensed from `Final_Project_Report_v2.md` for a single 15–20 minute engineering-manager review. No technical finding was removed; long narrative sections were replaced with tables, and repeated explanations were cut. The Implemented Providers table (Section 4.1) was independently re-verified against `sources/*.py` on 2026-07-15, adding per-provider implementation limitations and expansion opportunities. Source of truth: PostgreSQL (`jobs` , `provider_runs`), this repository's source code, and `job_api.xlsx` (API Catalog, Sheet1 sheets). Where a fact could not be verified, this report states “Not publicly available” or “Not verified during this project” rather than estimating.
